

## Experiences Related to Sensory Improvement

*This information was reported to Monroe Products and The Monroe Institute by individuals and/or by professional practitioners about the use of Hemi-Sync® in the late 1990s.*

I gave *Sensory: Hearing* to a colleague who suffered from episodes of ringing in his ear followed by intense headaches. The diagnosis was degenerative nerve disease. During his next episode, he listened to the tape five times over a three-day period. All the symptoms stopped, and he hasn't had another episode for three months now. He's very grateful for the relief and also for the relaxation from *Hemi-Sync* tapes.

\*\*\*

The doctors of an 80-year-old nun scheduled for cataract operation feared that the herpes infection in her eyes might flare up and perhaps lead to blindness. She insisted on going through, using *Sensory: Seeing*. The operation was successful, with no complications. She continued with the tape afterwards and greatly surprised her doctor by the total recovery of her vision.
